AMENDMENTS TO THE TITLE:

~~METHOD FOR PRODUCING BIOASSAY SUBSTRATE BY SUPERPOSING TWO SUBSTRATES ONE ON ANOTHER AND BIOASSAY SUBSTRATE~~METHOD FOR PRODUCING BIOASSAY PLATE BY STACKING TWO SUBSTRATES TOGETHER AND BIOASSAY PLATE

AMENDMENTS TO THE SPECIFICATION:

Please amend the specification as follows:

Page 14, lines 10-24, please amend as follows:

The reaction region R functions as a region or space, which can store a solution or hold a gel or the like as a place of an interaction. When the second substrate 12 has been accurately aligned with and stacked on the first substrate 1, the first electrode E_{11} arranged in the reaction region R forms opposing electrodes, which are equipped with an axis of opposition in a direction perpendicular to the bottom wall of the reaction region R, in association with a second ~~substrate~~ electrode E_{12} arranged at a predetermined position of the second substrate 12. These electrodes E_{11}, E_{12} play a role to form an electric field in the medium within the reaction region R when a voltage is imposed across both of the electrodes E_{11}-E_{12}. It is to be noted that the distance between the opposing electrodes can be from 1 μm to 1 mm or so.
